

RSSCT Sample Collection and Shipping Instructions

The following instructions pertain to the collection and shipping of source water for RSSCT projects to be completed at Engineering Performance Solutions (EPS).

Clients are responsible for all shipping fees and should pay ahead of delivery so there are unnecessary project delays.

Instructions:

1. Obtain polyethylene drum from Uline that accommodates 10 gallons per RSSCT column test to be completed.
2. Rinse drum with source water before filling completely.
3. Strap the drum on appropriately sized pallet, making sure drum will not tip over during transit. We recommend ratchet straps in a cross fashion.
4. Tape a label with project specific details such as sampling site location, address, and project manager so it can be easily identified by the lab.
5. **EPS requires a lift gate for delivery and maximum truck length cannot surpass 45 ft**
6. Samples should be shipped to EPS at:

**Engineering Performance Solutions
3161 St. Johns Bluff Road S. Suite 3
Jacksonville, FL 32246**

Important: We are open from 9am-5pm Mon-Fri.
EPS does NOT accept Saturday or Sunday deliveries.
